Revolutionising food waste disposal with the **NEW** **PRM Bio-Processor**

**Reduces
bin lifts**

**Reduces
odours**

**Improves
site hygiene**

**Energy
efficient**

**Space
saving**

The PRM Bio-Processor is capable of reducing waste by up to 80% saving money on waste collections whilst eliminating unhygienic food waste bins.

Pioneering technology from PRM

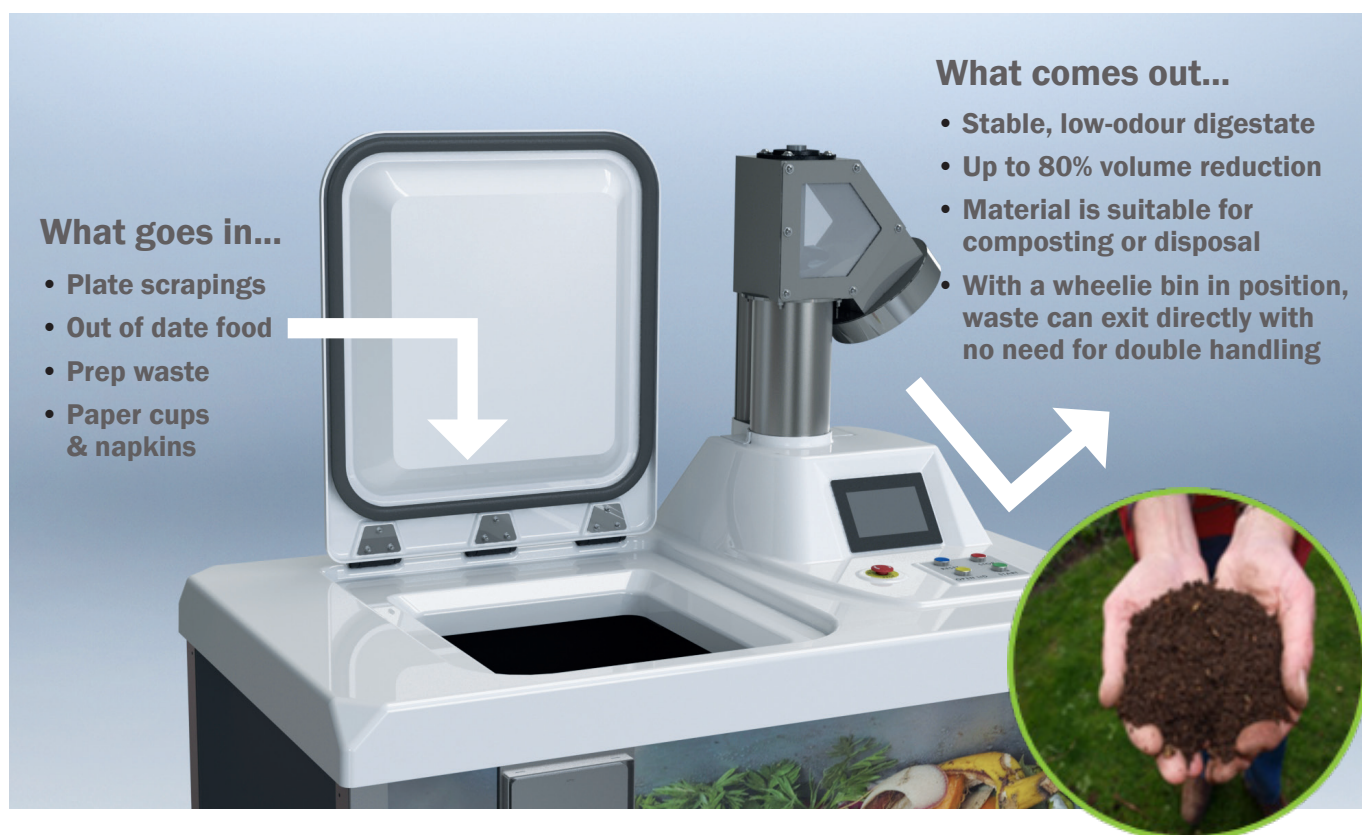

Utilising a thermophilic bacterial process in the operation, moist organic material is converted in the digester to a friable, low moisture stable product suitable for onward co-composting, anaerobic digestion or where appropriate, biofuel use.

Our exclusive control technology, JEM Logic, mimics nature by constantly adapting to change.

This way, greater levels of efficiency and reliability can be achieved compared to conventional controls.

If your business needs a reduction in food waste disposal costs and improved site hygiene, the PRM Bio-Processor is the solution.

Call PRM today on **01823 665541**

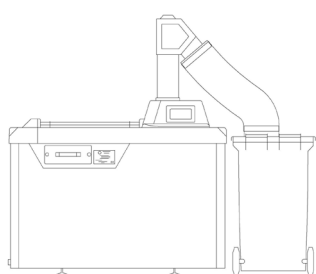

What goes in...

- Plate scrapings
- Out of date food
- Prep waste
- Paper cups & napkins

What comes out...

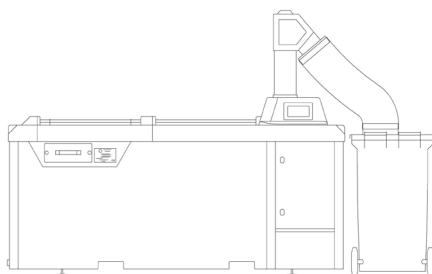

- Stable, low-odour digestate
- Up to 80% volume reduction
- Material is suitable for composting or disposal
- With a wheelie bin in position, waste can exit directly with no need for double handling
